DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Asami (U.S. 2002/0080367).
3. Regarding claims 1-4, Asami discloses (Figs. 2 and 6) a laser frequency discriminator that detects a difference between two laser frequencies to produce, said first and second paths having respectively a first and second optical length, said first and second optical length being different optical lengths in value, thereby a difference output signal and which comprises: a means (20) for splitting an input laser beam with two frequencies into a first and second path; a photo detector which is on the first path and produces a detection output signal by processing signals therefrom; a photodiode (27) which is on the second path and which produces a photodiode output signal by processing signals therefrom; a phase detector (86; see Fig. 6) which compares phases of the photodiode output signal with the detection output signal to produce thereby the difference output signal (See Paragraph [69] and [70]). Asami also discloses (See Fig. 2) the first and second optical paths respectively comprise a first and second optical fiber which have different lengths. Asami also discloses (See Paragraph [69]) the discriminator has an optimum frequency difference and further including an electro-

optical phase shifter to tune the optimum frequency difference by shifting the phase delay between the two laser frequencies. Asami also discloses the frequency discriminator uses feedback to stabilize the frequency difference between laser frequencies ([69] and [70]).
